Taro[®] Ultra Advanced 40 is the latest addition to the Chevron Marine Lubricants' Taro[®] Ultra regulation-ready range of new generation cylinder oils. This meets the new MAN ES category II standards and offers lower sulphur fuel engine operations from a low-BN oil. Chevron Marine Lubricants' Taro[®] Ultra range provides the reassurance of a global lubrication solution for virtually every fuel eventuality while lowering your fleet's total cost of ownership.

complete peace of mind

Lubrication is the lifeblood of your engine, and at Chevron Marine Lubricants we have years of experience developing high performance lubrication oils and support services to keep your vessels running smoothly. But with vital decisions to make around the IMO fuel sulphur cap, that came in to force in January 2020,

lubrication is the last thing shipowners want to think about. We have formulated Taro Ultra to provide regulation-ready, tailor-made solutions covering almost every compliant fuel requirement, delivering our customers peace of mind whichever operational route they choose, wherever in the world they are.

New

Taro Ultra Advanced 40 (BN 40)

Recommended for and suitable for use in the majority of two-stroke engines; **MAN ES (Category II)** and **WinGD** approved.

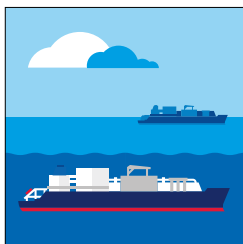

Recommended for and suitable for use in the majority of two-stroke engines; **MAN ES (Category I)** and **WinGD** approved.

Suitable for use; contact your Chevron Marine Products service representative for recommended options.

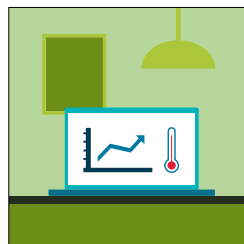

Always confirm that the product selected is consistent with the Original Equipment Manufacturer's recommendation for the equipment operating conditions and customer's maintenance practices.

reliability

We are an industry leader experienced in developing high performance lubricating oils for multiple fuel applications, with worldwide availability, security of supply and local customer support. The new Taro[®] Ultra range benefits from our in-house and cross sector expertise, a rigorous testing program and strong working relationships with major marine OEMs.

choice

Taro Ultra offers a tailored solution covering compliant fuel requirements for the majority of ocean going shipping operators. The formulations benefit from longstanding field experience with traditional and alternatively fueled vessels, performance analysis from the FAST vessel optimization program and years of combined Chevron technical knowledge.

Lead your business to a brighter future with a range of high-performance cylinder lubricant solutions and expert support that will future-proof your organisation and keep you regulation-compliant. Whichever operational route you choose — we've got you covered.
