chevron marine lubricants launches 2020 ready lubricant range

Chevron Marine Lubricants has developed a brand-new range of cylinder lubricants compatible with virtually all available global sulphur cap 2020 compliance options.

As the global shipping industry prepares for the arrival of the global sulphur cap in January 2020, the operation of ships in a multi-fuel future is a fast approaching reality. Lubricants are essential to the smooth operation and service life of propulsion machinery, but their optimal use is highly dependent on fuel sulphur content. A diversified marine fuel mix demands tailoring lubricant selection to fuel sulphur content to ensure compatibility with fuels bunkered across a fleet.

The Taro® Ultra range of lubricants deliver the same high performance and protection expected from Chevron's Taro® engine lubricants, with the added benefit of being compatible with almost all engines, marine bunker fuels and abatement technologies. The full range of Taro® Ultra products cover the needs of the vast majority of vessel owners, from Taro Ultra 25 which is compatible with low sulphur fuel, distillates and many alternative fuels, to Taro Ultra 140 which is ideal

for applications using high sulphur bunker fuels that require scrubbers emission abatement technology.

Specifically developed by Chevron Marine Lubricants to help ship owners and operators maintain efficient operations before and after the 2020 global sulphur cap implementation, Taro® Ultra products support the industry's transition to fuel sulphur constricted operations from 2020. "A key driver for launching Taro® Ultra is to ensure the product availability and the flexibility to meet the demands of the changing sulphur global landscape, recognising the need for more diverse fuel options we expect to be available both now and post-2020. This enables customers to make clear and concise choices that suit their unique operating requirements, ensuring the right products are available in the right places," Chia Yoo Soon, General Manager at Chevron Marine Lubricants.

“A key driver for launching Taro® Ultra is to ensure the product availability and the flexibility to meet the demands of the changing sulphur global landscape.”

Chia Yoo Soon

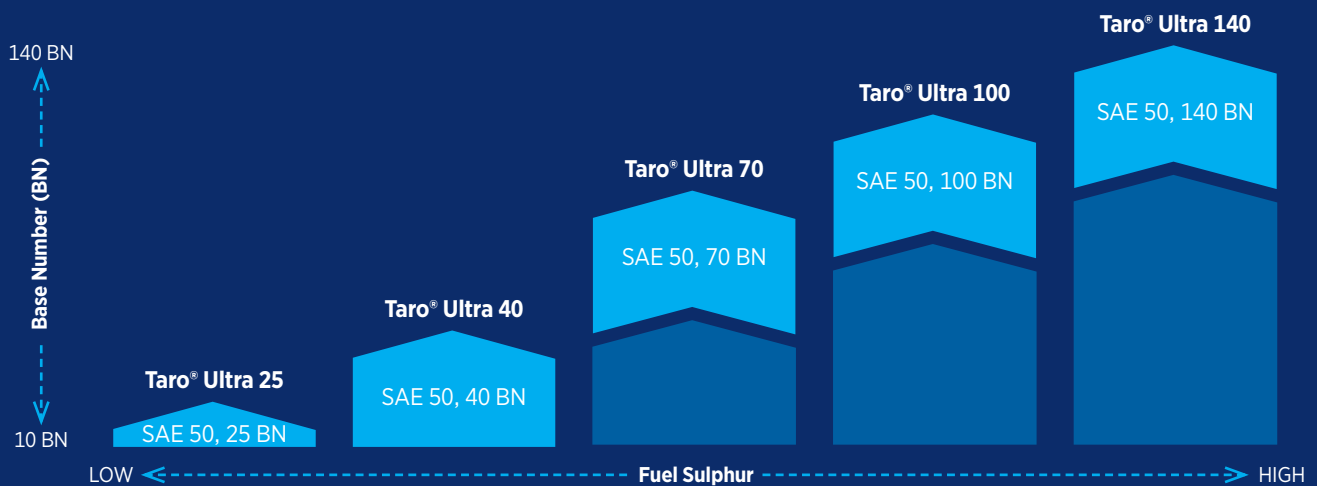

General Manager, Chevron Marine Lubricants

In launching the Taro® Ultra range, Chevron Marine Lubricants is providing its customers with complete peace of mind for the supply of regulation-ready engine lubricants that are compatible with virtually all options for regulatory compliance.

“We are performing a rigorous and extensive program of field testing with leading OEMs, demonstrating the strong performance of our lubricant offering. In addition to our trusted supply network, we are delivering the reassurance and supply security our customers need during the transition,” says Luc Verbeeke, Senior Product Development Engineer at Chevron Marine Lubricants.

The new range of Taro® Ultra lubricants will be phased in throughout 2019. ■
